Professional Summary

Software and platform engineer with 14+ years of experience in cloud-native, microservices, and event-driven systems. Strong hands-on experience with Java, Go, Python, Spring Boot, Kubernetes, AWS, Terraform, and Helm. Currently a Senior Platform Engineer at GEICO in Charlotte, working in a hybrid setup on Kubernetes-native infrastructure, serverless platforms, AI infrastructure, and production operations. Experienced in observability, CI/CD, GitOps, SRE practices, and building scalable systems with Knative, Istio, KEDA, Kafka, Grafana, and Loki.

Skills

Backend Development: Java, Go, Python, NodeJS, Spring, Microservices, Event-Driven Design, gRPC, Protobuf

Cloud & DevOps: AWS, Kubernetes, Docker, Terraform, Helm, CloudFormation, AWS CDK, Knative, KEDA, Istio, cert-manager, Cloud Foundry (PCF), ECS, EC2, Lambda, SQS, SNS

Streaming & Messaging: Kafka, Kinesis, SQS, SNS, Flink

Frontend Development: HTML, CSS, JavaScript, TypeScript, Angular, React.js, Servlets, JSP

Databases & Storage: Oracle, Postgres, MySQL, MongoDB, Elasticsearch, DynamoDB, S3, Distributed Cache

Design & Architecture: DDD, CQRS, Circuit Breaker, Saga, Distributed Systems, Netflix OSS (Eureka, Hystrix, Feign, Ribbon, Zuul)

Development Practices: SOLID, TDD, Pair Programming, Agile (Scrum/Kanban), GitOps, CI/CD, Infrastructure as Code

Observability & Monitoring: Grafana, Loki, Splunk, OpenSearch, Telemetry, Monitoring

Languages: English (Professional Working), Tamil (Native or Bilingual)

Professional Experience

Senior Platform Engineer – GEICO

Charlotte, NC | Jun 2024 – Present

- Designed and built a highly available serverless platform on Kubernetes using Knative, KEDA, Istio service mesh, and cert-manager

- Implemented observability with Grafana, Loki, and telemetry tooling to monitor system health and service reliability
- Managed Kubernetes infrastructure with Helm and ArgoCD for declarative GitOps-based continuous delivery
- Built and operated Kubernetes-native production workloads, including Knative services, Istio traffic management, KEDA autoscaling, and Kafka pipelines
- Developed AI infrastructure for RAG pipelines on Kubernetes, autoscaled inference workloads, and agentic AI patterns
- Partnered with product managers and stakeholders to define architecture requirements and technical roadmaps
- Owned operational health through on-call support, incident response, and resilience-focused engineering

Software Engineer – Fidelity Investments

Raleigh-Durham-Chapel Hill Area | Apr 2024 – Jun 2024

- Developed and integrated trading and cryptocurrency workflows for the Fidelity Digital Assets platform
- Aligned technology solutions with business objectives through collaboration with business partners and stakeholders
- Promoted CI/CD practices to improve delivery speed and software quality
- Mentored junior team members on technical implementation and engineering best practices
- Collaborated with cross-functional teams to deliver work efficiently and reliably

Software Engineer – VMware Carbon Black

United States | May 2022 – Apr 2024

- Engineered scalable microservices architecture processing 500,000+ transactions daily, improving reliability by 25% and reducing latency by 15%
- Developed event processing and alerting pipelines handling high event throughput per second
- Owned an alert data pipeline using gRPC, Protobuf, Kinesis, and OpenSearch
- Built an event-driven email notification application in TypeScript for alerting and customer communication workflows
- Collaborated with product, QA, and engineering teams to deliver security solutions
- Applied continuous deployment practices in a production environment

Software Engineer – Lincoln Financial Group

Greensboro | Dec 2019 – May 2022

- Reengineered contact center applications into scalable microservices on AWS
- Developed proof-of-concept solutions for Zuul routing, Spring Cloud Config, config bus, and streaming audio services
- Built microservices using ECS, EC2, S3, DynamoDB, Lambda, and SQS
- Developed Angular and TypeScript applications for configuration and administration workflows
- Implemented Splunk dashboards to monitor application performance and support proactive issue resolution
- Developed and maintained admin UI applications for configuration management
- Conducted code reviews and mentored junior team members

Senior Software Engineer – J.B. Hunt Transport Services

Lowell, Arkansas Area | Mar 2018 – Dec 2019

- Spearheaded development and maintenance of microservice applications for order management using Spring Boot, cloud infrastructure, and Spring Data JPA
- Supported order creation and tracking across intermodal, truck, ICS, and DCS business areas
- Developed microservices using the Netflix OSS stack for specific use cases
- Provided mentorship and guidance to junior team members on complex projects and technologies

Software Development Consultant – Syntel

Greater Atlanta Area | Oct 2016 – Feb 2018

- Developed microservices for purchase order management using Spring Boot, Spring Cloud, distributed cache, and Java 8
- Designed and implemented UI dashboards for monitoring and processing applications using Angular and React.js
- Implemented microservices using the Netflix OSS stack (Eureka, Hystrix, Feign, Ribbon, Zuul)
- Used Cloud Foundry (PCF) PaaS solutions for scalability and manageability
- Developed Node.js applications integrated with MongoDB for specific functionalities
- Applied pair programming and test-driven development (TDD) practices

Senior Software Engineer – Photon

Greater Philadelphia Area | Oct 2015 – Oct 2016

- Led design and implementation of a responsive web application for Lincoln Financial Group
- Developed RESTful APIs and AngularJS templates for integration with WebLogic Portal
- Designed microservice applications with a focus on low coupling and high cohesion
- Managed and mentored the team, providing guidance and support for skill development
- Worked within Agile Scrum methodology with sprint planning and daily stand-ups

Senior Software Engineer – Photon

Dallas/Fort Worth Area | Dec 2014 – Oct 2015

- Led end-to-end application development for JCPenney's responsive web presence
- Analyzed service API gaps and developed REST wrappers to bridge integration issues
- Developed Spring REST services for data exchange between application components
- Improved mobile browsing experience with responsive web applications
- Implemented business logic in the middle tier using Java classes and JavaBeans
- Provided technical guidance and mentorship to team members

Software Engineer – L&T Infotech

Manappakkam, Chennai | Jan 2013 – Dec 2014

- Led end-to-end application development for Travelers Insurance
- Developed an automated code generator to reduce manual coding effort
- Designed front-end screens using Servlets, HTML, CSS, and JavaScript
- Implemented business logic in the middle tier using Java classes and beans
- Coordinated demonstrations to validate business requirements against application functionality

Software Engineer – L&T Infotech

Chennai Area, India | Oct 2011 – Dec 2012

- Developed an application from scratch for Great Eastern Life Insurance
- Owned and maintained specific modules within the application
- Used Spring Batch to implement pre-approved loyalty cards
- Introduced jQuery pop-ups throughout the application to improve user experience

- Addressed multi-browser compatibility issues across the portal
- Developed Health Tip feature and implemented audit trails for user actions
- Designed database schemas and maintained scripts for optimal performance
- Supported local QA build processes and managed continuous integration

Software Developer – IndigoTx Software Technologies

Chennai Area, India | Apr 2010 – Sep 2011

- Owned end-to-end application development encompassing backend services and frontend interfaces
- Designed, coded, and debugged stock broker applications using multiple programming languages
- Transformed wireframes into HTML web pages ensuring accurate design representation
- Evaluated new technologies and conducted proof of concepts for implementation
- Maintained compliance standards across development processes
- Customized products to meet unique client requirements
- Designed and documented RESTful APIs with cross-functional teams
- Oversaw quality assurance and testing processes

Technical Analyst – Sutherland Global Services

India | Nov 2009 – Mar 2010

- Worked as Technical Analyst in non-voice process

Education & Certifications

Bachelor of Engineering – Computer Science, Anna University

AWS Certified Solutions Architect – Associate
